ABOUT ME & ENGINEERING PHILOSOPHY

Core Background

Informatics graduate with a strong foundation in enterprise network operations, server management, and full-stack development.

Problem Solving

Experienced in transforming real-world challenges into scalable solutions—from Docker containerization to zero-trust access servers.

Growth Mindset

Driven by continuous learning, actively advancing expertise in Linux System Administration and Network Security.

TECHNICAL SKILLS MATRIX

Infrastructure & Networking

- Cisco, Aruba, H3C, Ruijie Switches
- Enterprise Wireless AP & VLANs
- TCP/IP & NTP Server Management

DevOps & Virtualization

- Docker Containerization
- Virtual Desktop Infrastructure (VDI)
- Linux & Windows Server Admin
- JumpServer Deployment

Software Development

- React.js & JavaScript
- Laravel & Go (Golang)
- PostgreSQL, MySQL, Firebase
- RESTful API Architecture

Monitoring & Security

- LibreNMS Network Monitoring
- Grafana Analytics Dashboards
- Active Directory, LDAP, RADIUS
- NxWitness VMS Integration

 FEATURED PROJECT 01

CONTAINERIZED IT ASSET MANAGEMENT

 Role: IT Specialist & Developer (Stella International) | Tech: Docker, Web Stack, PostgreSQL

THE PROBLEM

Manual tracking of 1,600+ hardware assets caused data inconsistencies, untracked lifecycles, and high operational effort.

THE SOLUTION

Engineered and deployed a custom web-based IT Asset Management application containerized using Docker for seamless deployment.

THE IMPACT

Automated hardware tracking, eliminated manual data entry errors, and streamlined compliance audit readiness.

 FEATURED PROJECT 02

CENTRALIZED MONITORING & ACCESS CONTROL

 Role: Infrastructure Specialist (Stella & Pou Chen) | Tech: LibreNMS, JumpServer, Linux

THE PROBLEM

Lack of centralized visibility into network traffic and unmonitored administrative server access posed security risks.

THE SOLUTION

Deployed LibreNMS from scratch to monitor multi-vendor switches and implemented JumpServer to secure administrative SSH/RDP access.

THE IMPACT

Significantly improved incident response times and established strict audited access control across corporate servers.

 FEATURED PROJECT 03

PUBLIC SECTOR WEB PLATFORMS

 Role: Full-Stack Developer (Freelance & Campus) | Tech: React.js, Laravel, Firebase

THE PROBLEM

Slow manual administrative processes in village offices and campus platforms leading to delayed services.

THE SOLUTION

Engineered a Laravel platform automating village letter requests and built a React.js + Firebase billing system (PAMSIMAS).

THE IMPACT

Increased administrative processing speed by 40% and delivered an official campus website with 97% Google Lighthouse score.

LEARNING JOURNEY & FUTURE FOCUS

Backend Engineering

Building high-performance microservices and RESTful APIs using Go (Golang) and PostgreSQL.

Certifications

Hands-on preparation for Linux System Administration and Fortinet NSE security certifications.

Apple Developer Academy

Leveraging strong systems and logic foundations to build impactful, user-centric iOS applications.

THANK YOU

Ready to innovate at the intersection of infrastructure and software.
