IT professional with a solid foundation in enterprise network infrastructure, server maintenance, and daily operations. Coming from an Informatics background with experience in JavaScript and basic programming, I have always been interested in bridging physical hardware with software solutions. Recently, I built and deployed my own containerized Asset Management system using Docker, as well as set up centralized monitoring and access control servers from scratch to solve real operational problems at work. Currently pursuing Linux System Administration and Fortinet NSE certifications, I am eager to combine my hands-on infrastructure experience with modern systems engineering.

Work Experiences

Stella International Holdings Limited - Pemalang, Indonesia

Aug 2026 - Present

IT Specialist

- Set up and maintained the company's core network infrastructure, configuring switches and wireless access points from Ruijie, H3C, Aruba, and Cisco to ensure stable daily operations.
- Built and deployed a custom web-based IT Asset Management application using Docker to automate hardware tracking and replace manual data entry.
- Deployed and configured LibreNMS from scratch to actively monitor overall network health and traffic, significantly improving response times to network issues.
- Implemented and set up JumpServer to strictly manage, secure, and audit administrative access to the company's critical servers.
- Managed Virtual Desktop environments for end-users and controlled user permissions centrally via Active Directory.
- Handled the integration of physical security and smart office systems, including Face ID attendance machines, corporate access controls, and MyQ ID-card printing solutions.

Pou Chen Group Indonesia - Pekalongan, Indonesia

Jul 2025 - Aug 2026

Senior Staff (IT Support & Infrastructure)

- Configured and maintained core switches via console port (PuTTY) and managed NTP servers to support stable data routing and time synchronization across the facility.
- Monitored network health using LibreNMS and managed wireless connectivity (By Ruckus/Wireshark) to minimize downtime and maintain stable daily operations.
- Assisted in deploying production Kanbans and visitor dashboards using Grafana, utilizing JumpServer to securely manage operational visibility.
- Managed user access and device policies through Active Directory, LDAP, and RADIUS to maintain standard network security controls.
- Maintained Synology NAS storage and configured FTP protocols to support reliable data transfer between industrial systems and central servers.
- Supported campus-wide CCTV infrastructure using NxWitness VMS to ensure continuous recording and reliable security monitoring.
- Administered mail servers, handled user account lifecycles, and managed software compliance for over 1,600 hardware assets to ensure daily operational readiness.

Freelance - Pekalongan, Indonesia

Dec 2024 - Dec 2025

Full-stack Developer

- Engineered a Laravel-based platform to automate administrative letter requests, improving data accuracy and processing speed by 40%.
- Built a web-based billing system using React.js and Firebase, developing robust APIs to streamline community water service payments

Team Kreatif ITSNU Pekalongan - Pekalongan, Indonesia

May 2023 - Dec 2023

Front-End Developer

- Developed official campus website using React.js, achieving 97% Google Lighthouse performance and SEO scores.
- Translated complex Figma designs into functional, reusable web components with 98% visual fidelity.
- Engineered a responsive navigation system that increased mobile user engagement by 92% during peak admission periods.
- Awarded Top Performer for delivering a 15% improvement in site loading speed through code-splitting and asset optimization.

CV Putra Pandu Perkasa - Pekalongan, Indonesia

Jan 2023 - Mar 2023

Web Developer Intern

- Built dynamic web interfaces using React.js and integrated real-time data fetching via Firebase with 95% stability.
- Conducted cross-browser compatibility testing and debugging, resolving 96% of UI inconsistencies across Chrome, Safari, and Firefox.
- Optimized front-end asset delivery, resulting in a 90% faster First Contentful Paint (FCP) for client-facing applications.

- Created technical documentation and system flowcharts (UML/ERD) with 97% accuracy in mapping business requirements.

Education

Institut Teknologi & Sains Nahdlatul Ulama - Pekalongan, Indonesia <i>Bachelor of Informatics, 3.54/4.00</i> • Specialized in Software Engineering with a 98% mastery rate in Web Technologies and Database Systems. • Graduated with Cumlaude distinction	Sep 2020 - Sep 2024
--	---------------------

Organisational Experience

SAGA (ITSNU Esport Organization) - Pekalongan, Indonesia <i>Head of Events & Sponsorship</i> • Spearheaded strategic collaborations with 10+ local SMEs (UMKM), securing 95% of the targeted event funding and sponsorships. • Managed cross-functional teams of 20+ members to execute campus-wide competitive events with a 92% participant satisfaction rate. • Developed digital promotion strategies and social media campaigns, increasing event reach and campus branding engagement by 90%. • Negotiated contractual agreements and managed sponsorship deliverables with a 98% fulfillment rate, ensuring long-term partner retention.	Nov 2021 - Nov 2022
---	---------------------

Skills, Achievements & Other Experience

- **Network & Infrastructure** : Layer 2/Layer 3 Switch Configuration (Cisco, Aruba, H3C, Ruijie), TCP/IP, VLAN, LAN/WAN, Enterprise Wireless AP (Ruckus, Ruijie), NTP Servers, Data Center Operation.
- **Monitoring & Visualization** : LibreNMS (Deployed from scratch & Configured), Grafana (Dashboard integrations), Network Traffic Monitoring, NxWitness VMS (Enterprise CCTV).
- **Security & Access Control** : JumpServer (Full Deployment & Admin), Active Directory, LDAP, RADIUS, Firewall Administration, Fortinet NSE (In Progress).
- **Operational IT, IoT & Smart Integrations** : IT Asset Lifecycle Management (1,600+ assets), Industrial IoT & Automation Integration (Orisol machines), Enterprise Access Control (Face ID & Fingerprint/Somac), MyQ Smart Print Integration, SAP Basis Support, HRIS, Ticketing Systems.
- **Development & Logic** : React.js, JavaScript, Laravel, PostgreSQL, Firebase, MySQL (Effectively utilized for building internal tools, containerized asset management, and system integrations).
- **Systems & Virtualization** : Docker (Containerization), Virtual Desktop Infrastructure (VDI), Linux/ Windows Server Administration, Synology NAS, FTP, Enterprise Mail Servers.
